Find a page you created

Use this when you remember a topic but not where you saved it.

1. Open the search in BookStack’s header.

2. Enter a topic followed by `{type:page} {created_by:me}`. For example:

```
onboarding {type:page} {created_by:me}
```

This searches for onboarding content in pages you created, rather than books or chapters.

3. To match a complete phrase, put it in quotes:

```
"new starter" {type:page} {created_by:me}
```

Too few results? Remove the creator filter if someone else might have created the page. If you started from a book or chapter’s sidebar search, switch to the header search to look beyond that location.

Two unquoted words do not require both words to match. Use quotes when you need the phrase together.

Add a template without replacing your draft

1. While creating or editing a page, open the templates tab in the editor sidebar.

2. Find the template you need. Use the template search if the list is long.

3. Choose the **down arrow** on its box to add its content after your draft, or the **up arrow** to put it before your draft.

Selecting the template box itself replaces the editor’s content. Use an arrow when you want to keep what you have already written.

Template missing? You need permission to view its source page before it appears in the list.

The inserted text is a copy. Later edits to the template will not update this page automatically.
