AI-assisted synthetic stress case - not client work

Catalogue reconciliation demonstration

Three explicitly permitted cell changes were applied in this fixed-schema CSV test. Original rows were retained; exceptions remain available for review.

22	27	3	25	9
original and output rows	incoming records	changed cells	exception entries	quarantined incoming records

Exception entries include issues on quarantined records; these counts are not additive.

Rules and permissions

Matching uses the exact `variant_id`, with no fuzzy matching. Only same-currency decimal price updates and title outer-whitespace trimming are enabled. An empty permission set makes no edits. Protected and unknown fields are preserved; no rows are added or deleted.

Applied changes

Variant and field	Before	After	Enabled rule	Source references
v01 price	`10.00`	`12.50`	`same_currency_decimal`	Original record 1, line 2 Incoming record 1, line 2
v02 title	`"  Item v02  "`	`"Item v02"`	`trim_outer_whitespace`	Original record 2, line 3 Incoming record 2, line 3
v19 price	`10.00`	`15.00`	`same_currency_decimal`	Original record 19, line 20 Incoming record 19, line 20

For v02, the old title has two leading and two trailing spaces; the new title has neither. References are data record numbers and physical source lines.

Two exceptions from the same run

v04 SKU - the attempted change from `000021` to `21` was blocked as unapproved; leading zeros were retained. Incoming record 4, line 5.

v14 price - incoming `20.00` was withheld because its USD currency did not match the original ILS. Original `10.00` and ILS were retained. Incoming record 14, line 15.

Audit evidence

Each change records the old and new value, rule, and original and incoming record and line references. Verification reports unchanged input hashes and exact audit replay of the output. The output was checked against the permitted changes and original records.

Scope and limits

This finite synthetic test covers fixed-schema generic CSV only. It is not Shopify-import ready and includes no storefront upload.

Test date: 28 October 2026.
